INFRARED HEATING TECHNOLOGY

*Stylish, contemporary,
energy efficient.*

**Elegant, wall-mounted infrared towel rails
with a durable, toughened glass finish.**

Infrared Heating works by using electricity to heat surfaces, objects, and people, not the air around them. This is a more natural, and efficient way of heating spaces. Heat is not wasted through draughts and air moving up to the ceiling where the heat is not needed, but instead, keeps a steadier thermal mass.

- Durable, toughened safety glass
- Fast and responsive heat from the solid-state element
- Smart App control - control your heating from anywhere
- Maintenance-free, with a long warranty
- Open window sensing function
- Low power consumption with silent, economical, instant heat
- High quality finish
- Multiple heat settings with eco control

15 YEAR PRODUCT WARRANTY*

*Featuring five year warranty protection on the elegance range electronics.

*"Alexa, turn on
the heating."*
